

 Dominica Geothermal Development Company Limited Powering a New Generation...	Bid Clarification Request (In accordance with ITB 7.1)	Reference Number: RZ042100-PGG-COM-0021
Dominica Geothermal Risk Mitigation Project Contract		
Subject: Bid Clarification 0021 – Including terrain stability		
Bid Document Clause: Part 2 – Page 709/1756		
Detailed description of request In part 2 page 709/1756 states: <i>“Direct physical disturbance and additional sediment generation would also occur at stream crossing points. Unmitigated, this is considered to give rise to a potentially significant impact. With a well-developed Erosion and Sediment Control Plan in place (incorporating elements such as staging, clean water diversions, sediment retention etc.), as well as other proposed mitigation measures, it is considered that the impacts resulting from erosion of soils would be reduced to acceptable levels.”</i> During the site visit it was noted that the cliff pass and the first bridge site may affect the stability of the ground and as a result the terrain may be needing some additional reinforcement not accounted for in the actual study. Please confirm that the proposal should take into account the actual proposed design and that further needs in terms of terrain stabilization and structural changes will be developed afterwards and deemed not included in a lump sum price. Enclosures: None		
Response: The text quoted above is extracted from the Environmental Social Impact Assessment (ESIA). The ESIA document is only included to give the Contractor context to the ESMP requirements which are included in Part 2, Section VII, sub-section 2 “Specification” that details the required scope and specification thereof. Bidders shall satisfy themselves they understand what is required for the Design, Supply and Installation of the Plant and Facilities to meet the requirements set out in the bidding documents, including any civil works or stabilisation measures that may be required. Enclosures: None
